Excerpt: . exemplified in no. 10856, in which there is only the merest trace of a tubercle on the posterior border of the cingulum. In other cases (no. 10893) there is a distinct posterior basal cusp, and behind it a posterior basal tubercle. P is also relatively small compared with the sectorial. (Ratio of anteroposterior diameter in P and P 19:32 in C. dirus no. 10856, and 16.5:24.5 in a C. pambasileus from Alaska). There is a distinct posterior cusp present, and a very small basal tubercle is usually developed on the posterior border of the cingulum. The small posterior basal tubercle seems to be present more frequently than in the Recent wolves. The protocone is in general not made relatively smaller than in the Recent species through the regular addition of the posterior basal tubercle. The protocone commonly tends to be relatively large anteroposteriorly....
