Reviews

This published publication is fantastic. it had been written very perfectly and useful. Once you begin to read the book, it is extremely difficult to leave it before concluding.

Not illustrated. 1909 Excerpt: .in dental practice, it being a disinfectant, a detergent and a bleaching agent. A compound that yields its oxygen so readily is, of course, unstable; but it has been found that a solution containing 3 per cent, of pure hydrogen dioxide in water keeps its strength and qualities for months at ordinary temperatures. Higher strength solutions require the addition of considerable acid or other preservative, and must be looked upon as unstable and dangerous to handle. A 25 per cent, ethereal solution is put up in closed glass tubes with certain precautions noted upon the label. In this strength the agent is a decided caustic and must be handled with care. It is used chiefly as a bleaching agent. The official solution is called Aqua Hydrogenii Dioxide. Solution Of Hydrogen Dioxide H₂O₂. This is a colorless liquid, slightly acid in reaction, and it contains, when freshly prepared, about 3 per cent., by weight, of the pure dioxide, corresponding to about ten volumes of available oxygen. It is sometimes known as the ten volume solution, as it yields upon decomposition about ten times its own volume of oxygen. The acid it contains is necessary to its preservation. The most characteristic property of this liquid is its foamy decomposition in contact with organic matter, by the activity of which its strength can be roughly estimated. It gradually loses strength by keeping, though it is stated that deterioration will be retarded if a stopper of cotton be used...
