Reviews

This book is definitely not straightforward to get started on studying but extremely exciting to read. It is really simplistic but shocks in the 50 percent of the ebook. Once you begin to read the book, it is extremely difficult to leave it before concluding.

Excerpt: . . . the centre; and the board-room may be under it. It is not uncommon, in small country hospitals, to have a recess or small room leading from the operating theatre, in which the patients remain until they have recovered, or at least recovered the immediate effects of the operation. But it is more and more becoming the practice of the best London hospitals to carry such patients back to their own ward, where it is believed (a belief in which I entirely concur) they have, if the ward is what it should be, better advantages, better chances, better care, nursing, and supervision. Of course there are exceptional cases, as in ovariotomy, trephining, and c. , which may require to be by themselves. But this is for the surgeon to decide upon. Operating theatres are best lighted by a good large skylight and a steady northern light from one large window, quite up to the ceiling. There must be no conflicting lights from different windows, and no southern aspect. Now, as the operating theatre is the only room in the hospital which ought to have one sole north light, this is very convenient, because it may occupy a situation which would not do for a ward. We will next consider the application of these principles to the improvement of hospital plans. IV. IMPROVED HOSPITAL PLANS. Within the last few years very considerable advances have been made in hospital architecture in this country. A number of hospitals...
