

Robotics Research Technical Report: Object Recognition by Affine Invariant Matching (Classic Reprint) (Paperback)

Filesize: 8.88 MB

Reviews

Here is the best publication i have got go through until now. It is actually writer in simple phrases and never hard to understand. I realized this publication from my dad and i suggested this ebook to find out.

Forgotten Books, United States, 2015. Paperback. Book Condition: New. 229 x 152 mm. Language: English . Brand New Book ***** Print on Demand *****.Excerpt from Robotics Research Technical Report: Object Recognition by Affine Invariant Matching Abstract. We describe new techniques for model-based recognition of 3-D objects from unknown viewpoints using single gray scale images. The objects in the scene may be overlapping and partially occluded. Efficient matching algorithms, which assume affine approximation to the perspective viewing transformation, are proposed. The presentation is currently restricted to flat rigid 3-D objects. Point, line and curve matching algorithms are presented. The paper especially emphasizes the curve matching problem. Experimental results are included. 1. Introduction. Object recognition is a major task in computer vision. Most practical recognition systems are model-based systems, where the task is to match known models against an image of a scene (see a survey in [1]). In this paper we address the recognition problem of overlapping and partially occluded objects in composite scenes. The 3-D positions of the objects are arbitrary and no restriction on the viewing angle of the camera is assumed. We concentrate on recognition of flat rigid objects. However, our method can be extended to general objects and part of our future experiments will concentrate in this direction. The recognition is done from 2-D intensity images. We assume the affine approximation to the viewing transformation (see discussion in Section 2). Since we are concerned with recognition of partially occluded objects, no use of global features can be made. We represent our objects by sets of local features. These features can be points, line segments, curve segments, etc. In this paper we shortly review our previous results on object recognition by affine invariant point matching ([2]) and concentrate on new techniques based on affine invariant curve matching. Much...
