Fig. 21.--Nucleation  $n$  in terms of relative adiabatic drop of pressure  $dp/p$ , and of volume expansion  $v/v$  for dust.free air not energized, and for dust.free air acted on by the beta and gamma rays of radium and by the X.rays from different distances  $D$ .  $W$  refers to C. T. R. Wilson's condensation and fog limits,  $B$  to my own;  $T$  shows J. J. Thomson's results referred to scale of the diagram. Several older series,  $V$  to  $X$ , are given for dust.free air. 40. Graphs. Dust-free air.--The charts (flgs. 20, 21, and 22) contain a number of curves showing the nucleation in different scales (computed from the angular diameter of coronas) in terms of the exhaustion. In figs. 20 and 21 typical cases are given, in their lower parts only. Fig. 22 contains full curves on a smaller scale. Thus the curve for the vapor nuclei of dust.free air begins appreciably below  $dp/p = 0.26$  ( $t/v = 1.24$ , li. 22.--Results similar to preceding but in a different scale.  $O. P.$  is taken from the Carnegie Institution of Washington Publication No. 62.  $W$  indicates the probable position of Wilson's line, so far as can be made out. adiabatic drop from 76 cm., 19.8 cm.), but it hugs the axis until about 0.33, after which it sweeps upward far beyond the chart into the hundred.thousands. The position of Wilson's...
